

S/M FLECKVIEH CATTLE COWHERD DATA Photos, Pedigree, Production & EPDs December 2022

Here you will find data for the S/M Fleckvieh cowherd that will calve in 2023, grouped by Cow Families. Each female in a cow

family descends from the same elite foundation female. In our experience the breed's most productive females consistently pass on their ability generation to generation. It is these females that we have built our herd around.

Data is provided so that you can know the production of each dam. Progeny weaning weights (WW) are adjusted to 205 days and the in-herd ratio is noted. EPDs as of December 2022 are shown. We update this resource each year as new data is available and females come and go from our herd. For more complete data on the 2022 calf crop, please see the report available from our home page, "2022 Calves."

We hope this is helpful for you.
