

S/M FLECKVIEH CATTLE COWHERD DATA Photos, Pedigree, Production & EPDs November 2024

Here you will find data for the S/M Fleckvieh Cattle cowherd that will calve in 2025, grouped by Cow Families. Each female in a cow

family descends from the same elite foundation female. In our experience the breed's most productive females consistently pass on their ability generation to generation. It is these females that we have built our herd around.

Complete data is provided so that you can know the production history of each dam. Progeny weaning weights (WW) are adjusted to 205 days and the weaning ratio is noted. EPDs are as of November 2024. We update this resource yearly as new data is available and females come and go from our herd. For more complete data on the 2024 calf crop, please see the report available from our homepage, "2024 Calves." We hope this this is helpful for you.
